AUTOMATIC EMERGENCY BRAKING¹

can independently recognize dangerous situations ahead of the road and warn the driver acoustically. If another car or a pedestrian gets too close, the system decelerates your car. It even brings it to a standstill for speeds of up to 30 km/h.

ECO LED HEADLAMP
The advanced economical lighting technology saves electrical power and thereby reduces fuel consumption.

LED HEADLAMPS WITH ADAPTIVE FORWARD LIGHTING

Here you can see improvement at work: look ahead of curves and keep the high beam activated without affecting oncoming vehicles. Let the headlamps lead you through the night – it automatically adapts to the conditions.

AUTOMATIC CRUISE CONTROL²

Sees ahead and maintains a safe distance from the vehicle in front at speeds between 30 and 180 km/h. The automatic acceleration and braking is extremely comfortable on long trips.

¹ Automatic Emergency Braking with Pedestrian Detection works automatically above 5 km/h and below 140 km/h. From 5 to 30 km/h the deceleration metric to reduce the impact speed of the collision is 0,9 g. From 30 to 140 km/h the system reduces the speed by a maximum of 50 km/h. Above this threshold, the driver needs to brake himself/herself to reduce the speed even further. Operational speed range of Automatic Emergency Braking with Pedestrian Detection depends on the detected obstacle (mobile obstacle: from 5 to 140 km/h; fixed obstacle: from 5 to 80 km/h; pedestrian: from 5 to 60 km/h). Opel driver assistance systems are intended to support the driver within the limitations intrinsic to the system. The driver remains responsible for the driving task.
